

### **DRT03 Drilling (amendments)**

The DRT03 Drilling Training Package was endorsed in November 2003. It is a fully reviewed and revised version of the original DRT98 Training Package.

To meet the requirements of coal seam methane gas drilling, the Resources and Infrastructure Industry Skills Council has:

- developed four new units of competency;
- revised one existing unit of competency to incorporate the requirements for coal seam methane gas drilling;
- made minor amendment to one existing unit; and
- utilised nine existing units of competency as appropriate for the coal seam methane gas drilling requirements.

The qualifications structure and packaging rules of 12 qualifications were adjusted to incorporate these units to meet industry requirements.

Employability Skills were included in all units to replace Key Competencies. Also, units from the superseded BSZ98 Training Package were replaced with units from the TAA04 Training and Assessment Training Package.
